

# Uninstall TEST Onbase Unity Client

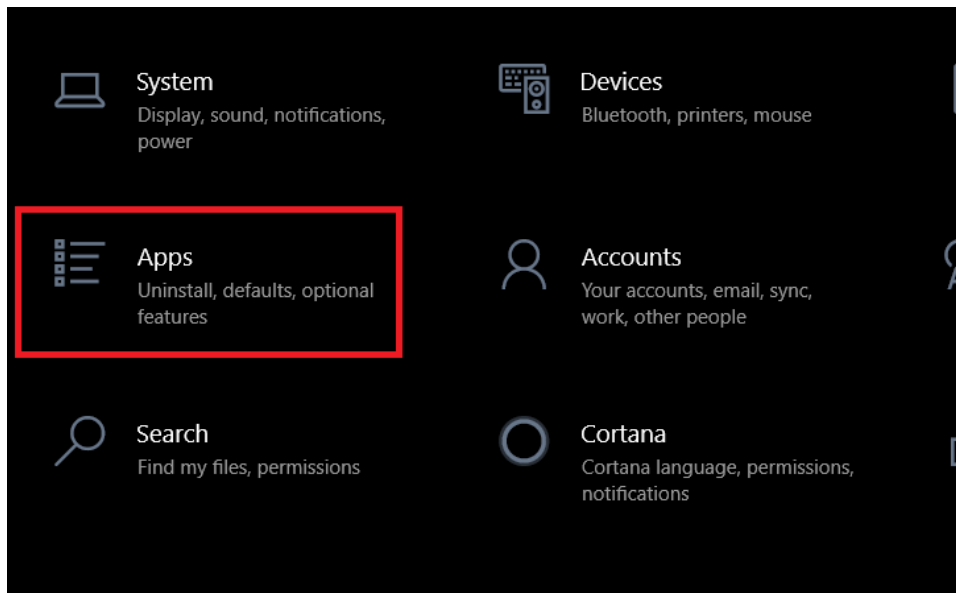

Tuesday, October 22, 2019 9:11 AM

These instructions assume you are running Windows 10 on your workstation.

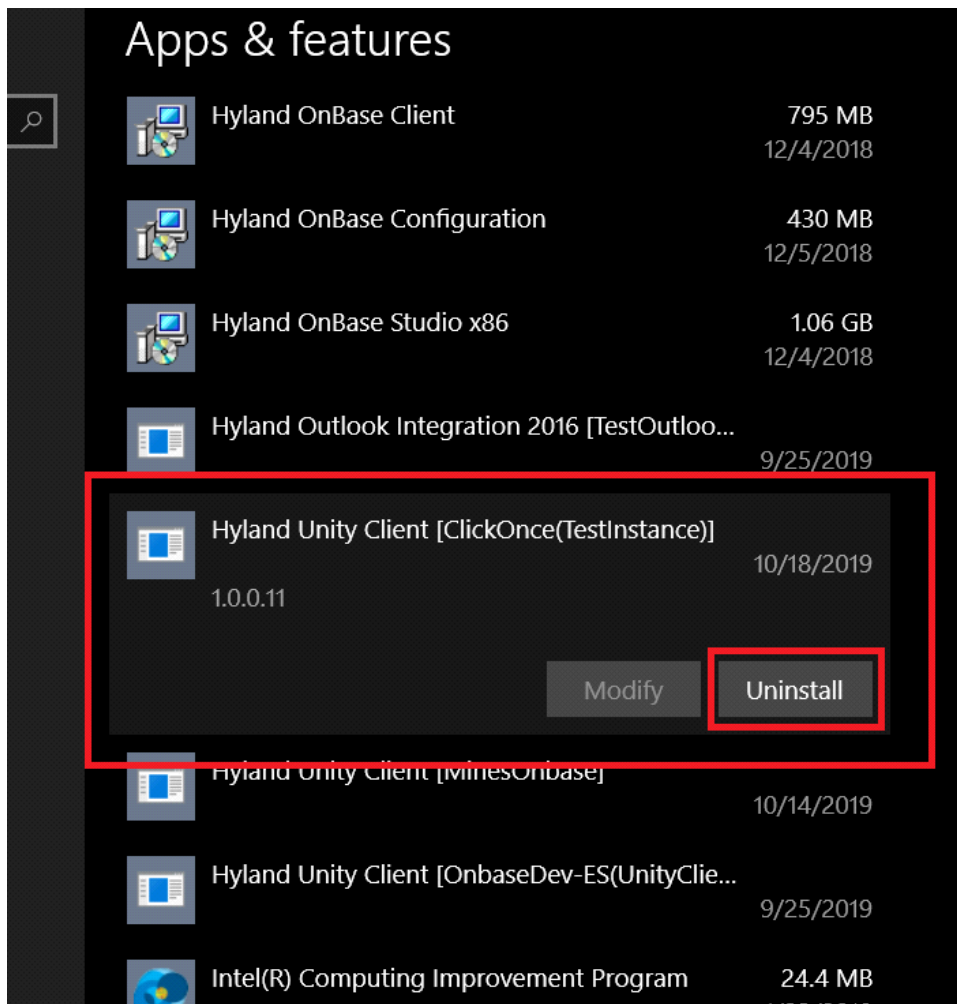

Click the start button and click the cogwheel that says "Settings"

Click on "Apps" - note that your menu may appear white depending on if dark mode is on or not.

Scroll through the list of applications until you find the Hyland section, look for "Hyland Unity Client [ClickOnce(TestInstance)]"

This should not require an administrator to uninstall if the installation was done by you. If the install took place by an administrator or desktop support, you will be prompted for an administrator's credentials to do so. If that happens, please contact [its\\_aa\\_team@mines.edu](mailto:its_aa_team@mines.edu) for assistance.
